DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/16/08 has been entered.

Claim Objections

2. Applicant's response has overcome the outstanding claim objection.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1, 4-7, 16, 19-21, and 38 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 1 recites "feeding a replica of the entire modulation symbol sequence to each of a plurality of orthogonal sequence covers". However, the specification, as filed does not provide support for such limitation as claimed. The specification, at paragraph 0044 clearly

teaches that a portion of the modulation symbol sequence is fed to each Walsh covers. That is a separate modulation symbol sequence is simultaneously fed to each Walsh covers. Similar comment applies to similar limitation recited in claim 16 and 38 and to each of the dependent claim.

Allowable Subject Matter

5. Claims 8-11, 13-15, and 23-26, 28-29 are allowed.

Response to Arguments

6. Applicant's arguments filed 7/16/08 have been fully considered but they are not persuasive. It is alleged that paragraph 0081 provides support for the limitations "feeding a replica of the entire modulation symbol sequence to each of a plurality of orthogonal sequence covers". However a review of paragraph 0081 of the specification does not show such a support for the claimed subject matter. Paragraph 0081 only teaches that a symbol from the symbol sequence is coded into a first frequency bin, the subsequent symbol is coded into the second frequency bin and so forth. Such section of the specification is silent about feeding the entire symbol sequence to each covers, as presently claim. In addition, paragraph 0044 clearly teaches only a portion of each symbol sequence is fed to each cover as oppose to the entire symbol sequence. In addition, in view the amendment to the claims, the outstanding art rejection has been withdrawn.
